CENTENARY YEAR 1914-2014

Towards accurate observation and modelling of Antarctic glacial isostatic adjustment

Prof Matt King – University of Tasmania

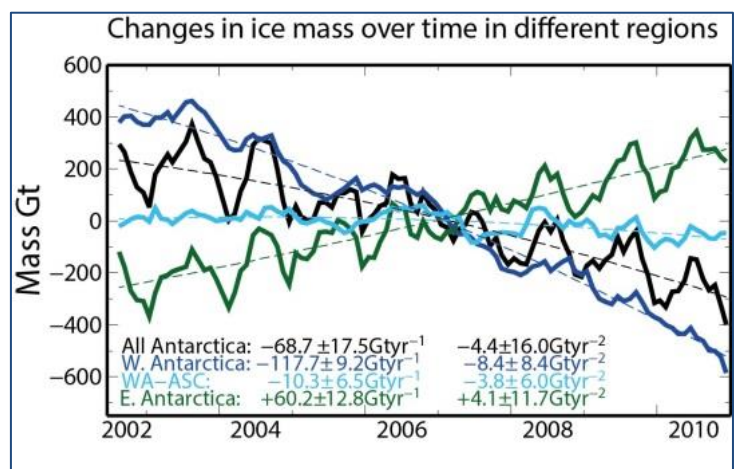

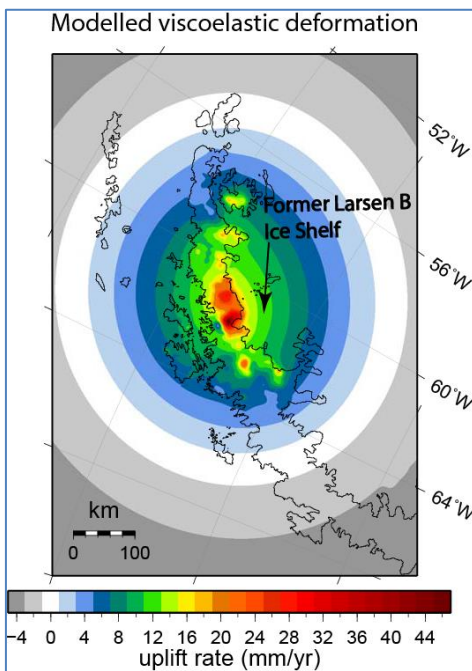

Thursday 8th May

5.30 pm for 6.00 pm: Refreshments provided

**Exhibition Space, Building 500, Curtin University
(off Manning Rd)**

Prof Matt King will discuss the lack of consensus on estimates of Antarctica's contribution to recent sea level changes, the reasons for this and how new measurements of glacial isostatic adjustment (GIA) are yielding new insights into ice-sheet contribution to sea level, past ice-sheet changes and even the structure and rheology of Earth.

Skeptical Science

Members, Guests and Public All Welcome
